LMS-RGB1 Combined Triple-Wavelength Laser System

Series Specifications:

Nominal Wavelength	473 nm, 532 nm, 671 nm
Output Type	CW
Laser Source Type	DPSS

Overview:

The LMS-RGB1 Series of Combined-wavelength Diode-Pumped Solid-State (DPSS) Lasers are ideal for applications requiring red, green, and blue wavelengths to be emitted from a single laser module- simultaneously or individually. These RGB laser systems are available in up to 500 mW combined output with a high level of long-term output power stability and long operating lifetime at an aggressively competitive cost.

These lasers are commonly used for laser light shows (entertainment) as well as a variety of scientific applications including, PIV, Raman Spectroscopy, and a broad spectrum of other applications. The driver is available as a complete FDA-compliant system or as an O.E.M. component with significantly reduced dimensions.

Available with TTL and Analog modulation, and in a wide array of output power and stability levels, Laserglow products are currently being used by some of the World's top universities and other prominent research facilities.

Key Features:

- Air cooled - no need for water cooling or external chiller
- Lightweight, compact design

CW: All specifications are based on performance at full output power and after the specified warmup period. Output characteristics may change if the laser is run at a different power level.

Q-Switched: Specifications are based on the laser pulsing at the specified design frequency. Output characteristics may change if the laser is run at a different frequency.

Power Supply Options:

These lasers are available with several different power supply options. The model that you have selected is highlighted below, and any other options are shown for easy reference.

<div>FDA-Compliant LabSpec</div> <div></div>	Power Supply Type:	FF	FM
