LRS-0543 DPSS Laser System

Series Specifications:

Nominal Wavelength	543 nm
Output Type	CW
Laser Source Type	DPSS

Overview:

The LRS-0543 Series of Diode-Pumped Solid-State (DPSS) Lasers are ideal for applications requiring 543 nm laser light at power levels from 20 mW to over 1.5 W. This series is available in three levels of long-term output power stability and has a long operating lifetime at an aggressively competitive cost.

These lasers are commonly used in applications involving fluorescence excitation and other applications requiring a narrow linewidth and a high level of long-term output power stability. The driver is available as a complete FDA-compliant system or as an O.E.M. component with significantly reduced dimensions.

Laserglow products are currently being used by some of the World's top universities and other prominent research facilities.

Key Features:

- Air cooled - no need for water cooling or external chiller
- Lightweight, compact design
- Efficient DPSS technology runs on standard AC power (85 - 264 V, 47 - 63 Hz)
- >10,000 hours continuous maintenance-free operating life
- TTL and Analog modulation (input via BNC connector) *lab-spec models only*
- Adjustable output power (via lockable dial) *lab-spec models only*
- LED display showing LD current, laser cavity temperature *lab-spec models only*
- FDA CDRH Compliant Class IIIb / Class IV enclosure
- 48-hour replacement coverage available for an additional fee on specific models

Package Includes:

- Laser Head
- Driver/Power Supply
- Power Cable
- BNC Connector (LabSpec models only)
- Keys, Safety Interlock
- Hard-shell Carrying Case

Specifications:

This spec sheet has been generated specifically for part number R54-N, per your request, and data for the entire series is also displayed for your reference. The specs which are specific to R54-N have been highlighted below in **red + bold**.

CW: All specifications are based on performance at full output power and after the specified warmup period. Output characteristics may change if the laser is run at a different power level.

Q-Switched: Specifications are based on the laser pulsing at the specified design frequency. Output characteristics may change if the laser is run at a

different frequency.
