LVD-0785 Diode Laser System For Raman Spectroscopy

Series Specifications:

Nominal Wavelength	785 nm
Output Type	CW
Laser Source Type	Diode

Overview:

785 nm diode lasers are ideal when both reliability and low cost of ownership cannot be compromised. Recent advancements make this laser form factor suitable for an even greater number of applications. As fewer materials absorb at the infrared wavelength, utilizing 785 nm laser light allows for fluorescence suppression. 785 nm is also a lower energy wavelength as compared to visible light, allowing for analysis of sensitive biological specimens.

High power, wavelength stability and narrow linewidth make the 785 nm laser for Raman Spectroscopy from Laserglow Technologies a versatile choice for cost-effective, high-resolution Raman applications.

Key Features:

- Wavelength stabilized at 785.03 nm
- Narrow spectral linewidth at 0.2 nm
- Fiber coupling available: 100 μm - 400 μm (optional)
- Output power: Up to 700 mW
- TTL and Analog modulation available
- Integrated thermoelectric cooling
- CW operating mode
- 10,000 hours expected lifetime
- 1 year warranty
